SOLAR UTILITY VEHICLE 'SUV' AN EDUCATIONAL PROGRAM

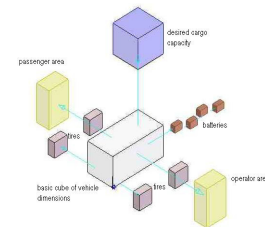

SolarQuest® and Global Light and Power have developed an educational program for science and vocational skills training. The program uses an interdisciplinary project-centered lesson plan in combination with internet based distance learning. The program is termed the "Solar Utility Vehicle Educational Program", or "SUV EP".

A prototype vehicle has been designed and built to provide illustrative drawings and photos as examples throughout the process. Participants will design and fabricate their own vehicle from initial concept to finished fabrication and testing.

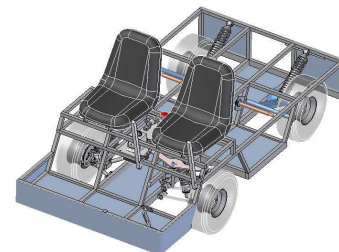

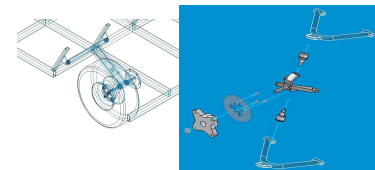

We intend to collaborate with others who can benefit from participation in the program. Opportunities range from establishing marketing and distribution of educational materials to sponsorship. We welcome input into the program that reflects individual or corporate needs of our future working partners.

The SUV EP product consists of a manuscript accompanied by an online virtual schoolroom, selected hardware, onsite training and technical support. For more information, contact SolarQuest® at +1 888 786 2787.

Our program takes participants

from a concept layout

... to working drawings

...and classroom fabrication

... completely through building and testing a finished vehicle
